WEEK 18	Red Touch
WEEK 20*	Illumi Facial
WEEK 22	Red Touch
WEEK 24*	HIFU / RF

TREATMENTS

Red Touch

The first and only medically graded laser system worldwide that uses a unique wavelength 675nm which acts directly on the collagen in the dermal layer. Gold standard in skin rejuvenation, wrinkle reduction, pigmentation, lesion removal, skin laxity, textural, scar improvement and melasma. Non-invasive, painless downtime-free procedure.

HIFU

High Intensity Focused Ultrasound - Medically graded non-surgical treatment that uses ultrasound to lift, firm and tighten the skin. HIFU deposits focused ultrasound energy below the surface of the skin, contracting all skin layers in one treatment. HIFU is extremely effective in firming, tightening and lifting the facial skin and also reducing excess skin on the body.

RFMN

Radio Frequency Micro Needling - is an advanced non-cosmetic treatment that combines microneedling with radiofrequency energy to rejuvenate and improve skin appearance. RFMN uses ultrafine needles to create microscopic channels in the skin while simultaneously delivering radiofrequency energy, leading to increased collagen and elastin production. Wrinkle reduction, skin tightening, improved skin texture and tone, reduced appearance of acne scars and blemishes, minimized pore size, treatment of sun damage and uneven skin tone, improvement of stretch marks.

Illumi Facial

Illumi Facial is the next generation of the highly successful Photofacial treatment using a new and unique combination of a chemical peel together with powerful, medical grade Lynton IPL technology. This treatment is perfect for skin congestion, decolourisation, wrinkles, skin tone, acne, sun damage, and vascular lesions and creates filter free skin.

ReSurface

YAG fractional laser resurfacing targets both the superficial and deep layers of skin. It stimulates cell renewal which smooths out the texture of the skin. It also targets the deeper layers of skin by promoting the relaying of collagen. The treatment can improve the skin texture, reduce static lines, wrinkles, acne and stretch marks.

ReBright / IPL

Medically graded dynamic reflex IPL technology treats hyperpigmentation / vascular outbreaks and areas of redness. This treatment can improve discolouration on the skin such as redness, diluted veins, freckles, sun spots and acne and is excellent for skin rejuvenation and a youthful appearance.
